Feng Shui is much more than a way of arranging furniture for good luck. The Chinese geomancers have a very intricate set of beliefs with roots in Animism, Taoism and Confucianism. Feng shui teaches that the earth has rivers of energy, much like the meridians in the human body of the acupuncturists. Feng shui also takes into account stellar alignments, including some mysterious invisible stars in the north which don't seem to correspond to a present-day constellation. Ancient monuments around the globe are well-known to be aligned by principles similar to this; for instance, the Pyramids of the Giza plateau form an enormous and very exact map of the belt of Orion. The ley lines of the English country-side link important sites from one end of the island to the other. And some believe that the strange layout of the streets of Washington DC have an arcane Masonic significance. Whether or not you believe in geomancy, evidence of its use is all around us.

Early work about Feng Shui

By MR EOIN MEEHAN

This is one of the earliest western books written about Feng Shui. It was written about 1870. It is interesting on two counts; firstly it gives the reader a "fresh" overview of traditional Feng Shui because at that time the art was unknown in the west, and secondly because even though the author is obviously impressed by the science and history of Feng Shui, he keeps having to "reel in" his enthusiasm for his conservative, western audience. He wavers frequently between sheer admiration for the Chinese, and amusement at these "uneducated peasants"!

He discusses how westerners in China discovered Feng Shui existed when they tried to build railways in straight lines across the land. This display of ignorance of basic Feng Shui horrified the Chinese who refused to cooperate with the railway builders until they modified their plans.

This book is one of many referred to by Stephen Skinner in his book "Feng Shui: The living earth manual of geomancy."
