Environmental Science course

By D.S.B.

I bought this for a college course in Environmental Science. There are a lot of really nice graphics and the text is recent, on point, and a great addition to the course material. I have no complaints yet.

The perfect text for a 101 class

By Joe Dusza

I used this book for my Physical Geology (GS101) class and it has just the right amount of visuals (photos, graphs, diagrams, etc.) for the content of the text. If your professor has a difficult time getting the information inside your head, this book will help you immensely.

Detailed and Succinct with plenty of Visuals, Perfect for the Casual College Student

By Derrick C.

Great copy. A lot of interesting facts and information covering the whole range of geographic topics from weather, atmosphere and climate to land forms, rivers, earthquakes, deserts and natural "disasters." I'm taking a college geography course this summer and this book is the basis pretty much for that entire course. Although tedious at times and unafraid to inject plenty of 'geo-centric' vernacular, this textbook is a detailed, succinct read perfect for even for the casual college student.
